

## SOFTWARE

Software of monitoring of security systems and automatic teller machines «SmartIntegrator»:

- Ability to create a distributed hierarchical monitoring system across the country, at the same time, fragmentary deployment of the system with following joining into a single network is permitted.
- Registration of events in a distributed system and update of status of DCE in real-time.
- Formation of the archive in real-time and download of archives of DCE according to the schedule (during less busy channels for business transactions).
- A local graphic and web-interface.
- In a single interface integration of monitoring equipment from different companies.

## TECHNOLOGY

### Intelligent Video Analytics

- Use intelligent video analytics modules built-in into registrars.
- Own video analysis software modules to detect sabotage (sticking or defocusing of cameras).

### Storing of video

The unique technology of reliable archive storage of stream data downloaded from the recorders according to the schedule. This technology provides:

- Low-level work with the HDD server.
- Alignment of the archive's depth by time among all recording channels in a cyclic recording mode.
- Quick access to the archive by time and events.

The company Nordavind  
and the company Armo-Systems  
offer  
a complete solution  
for organizing centralized monitoring  
of security systems and ATMs.

#### We solve the following problems:

- Creation of centralized monitoring system for already existing heterogeneous security system including equipment from different companies.
- Integration of numerous terminals into a single system.
